

OLAJUWON OLASIMBO

Frontend Software Engineer | React · React Native · TypeScript · Cloud-Native SaaS Applications

olasimbo15@yahoo.com · github.com/OlajuwonX

PROFESSIONAL SUMMARY

Frontend Software Engineer with 4+ years of experience architecting and delivering enterprise SaaS products in cloud environments. At PolicyCortex, I own the frontend architecture for a multi-cloud FinOps platform helping enterprises monitor, optimise, and govern Azure cloud spend. I drive technology decisions that shape product performance and scalability; from library selection to API design and RBAC implementation. Known for cross-functional collaboration with backend and product teams, performance engineering and shipping reliable production software.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend & Mobile: React, Next.js, React Native, Expo, React Router, NativeWind, Tailwind CSS

State, Data & APIs: Zustand, TanStack Query, Context API, REST APIs, GraphQL, WebSockets

Cloud & Databases: Microsoft Azure, Vercel, Cloudflare, MongoDB, PostgreSQL, Supabase, Appwrite

Testing, Tooling & Performance: Playwright, Vitest, Git, GitHub, CI/CD, Docker, Sentry, Lighthouse, Core Web Vitals, WCAG Accessibility

PROFESSIONAL EXPERIENCE

Frontend Software Engineer · PolicyCortex

Nov 2025 – Present

Dallas, TX · Remote

- Own the end-to-end frontend architecture for a multi-cloud FinOps SaaS platform; partnering with backend engineers to design API contracts, response pagination, and dashboards covering daily Azure spend, anomaly detection, budget tracking, and spend forecasting across tenants and subscriptions.
- Identified that the existing chart library couldn't scale to enterprise-level datasets; evaluated alternatives, ruled out Highcharts due to SaaS licensing costs, and migrated to ApexCharts, improving rendering performance by 30%+ without library lock-in.
- Recommended replacing WebSockets with TanStack Query for server state; cutting redundant API calls by 35%, improving data retrieval by 25%+, and enabling smart background refresh across data-intensive dashboard views.
- Established end-to-end testing standards with Playwright and TypeScript; authoring 20+ test suites that reduced regression defects by 40% and supported a stable CI/CD pipeline.
- Collaborated with backend engineers to design and implement a role-based access control (RBAC) system governing user permissions across cloud resource management, governance, and AI automation features.
- Drove frontend decisions on memoization, optimistic UI updates, and API pagination; improving dashboard responsiveness for enterprise users managing thousands of cloud resources across multiple subscriptions.

Frontend Developer · Orvyn Media

Jan 2024 – Oct 2025

Remote

- Partnered with founders and stakeholders across multiple client engagements, leading discovery sessions and solution planning to translate business requirements into scalable digital products.
- Architected performant React applications across 5+ client projects, consistently achieving sub-2-second load times through lazy loading, code splitting, and bundle optimization.
- Improved Core Web Vitals and Lighthouse scores through JavaScript bundle optimization, modern image delivery, and elimination of render-blocking resources.
- Integrated Paystack payment APIs into e-commerce platforms, improving checkout reliability and reducing failed transactions through robust error handling.
- Increased organic visibility across client platforms through semantic HTML, metadata optimization, accessibility improvements, and structured data implementation.
- Served as primary frontend liaison between technical and non-technical stakeholders, ensuring on-time delivery aligned with business goals.

Frontend Developer Intern · Techinnators

Dec 2022 – Nov 2023

Remote

- Developed responsive, accessible UIs using React, TypeScript, and Tailwind CSS for production applications in a startup environment.
- Collaborated with senior engineers, designers, and product managers throughout Agile cycles, contributing to feature builds, testing, and releases.
- Participated in code reviews, sprint planning, and QA processes, strengthening engineering best practices across releases.

PROJECTS

JobHunt (In Progress) | *Next.js · TypeScript · BullMQ · PostgreSQL · AI APIs*

- Independently identified a gap in fragmented job search and began building a distributed job intelligence platform; later discovering the approach mirrors emerging platforms like Jobright.ai.
- Solved the challenge of Nigerian job boards protecting APIs via server-side rendering by engineering HTML scrapers, and applied adapter patterns with keyword injection against Lever and Greenhouse APIs to return role-specific results rather than generic listings.
- Built BullMQ-powered async queue processing to handle large-scale job ingestion and background sync without blocking the UI.

Hire-Lens | *React Router · TypeScript · PuterJS · AI APIs*

- Built to solve a real problem: ATS systems penalise engineers who write naturally; designed a real-time resume scoring engine that evaluates CVs against job descriptions and surfaces keyword gaps before submission, not after rejection.
- Delivered structured ATS compatibility scoring, gap analysis, and actionable recommendations via dynamic API-driven workflows.

CloudNest v1 (In Progress) | *React Native · Expo · NativeWind · Cloud Storage APIs*

- Building a mobile-first cloud vault enabling secure uploads of video, images, and documents accessible from any device.
- Implementing modern mobile UX patterns, secure file-handling workflows, and scalable cloud storage integrations.

EDUCATION

B.Sc. Quantity Surveying · Federal University of Technology, Akure 2018 – 2024
